

Navigating the currents of change: The evolving landscape of Power Purchase Agreements in the UK

06 March 2025  Conor Macaire Duncan and Zoe Stollard

In the dynamic realm of energy procurement, Power Purchase Agreements (PPAs) stand as a useful instrument that not only facilitates the transition for corporate entities towards renewable energy but also redefines the interactions between generators and consumers of power.

In this article, we set out to unpick the complexities of PPAs in the UK with respect to the contractual principles and nuances that distinguish their varying forms, so that corporate entities as consumers of power as well as energy producers can effectively navigate and leverage them for both sustainable energy solutions and economic benefits.
